```java
class Shape {

    void area() {
        System.out.println("Area of shape is undefined");
    }
}

class Circle extends Shape {

    double radius = 5;

    @Override
    void area() {
        double result = 3.14 * radius * radius;
        System.out.println("Area of Circle: " + result);
    }
}

class Cylinder extends Shape {

    double radius = 3;
    double height = 10;

    @Override
    void area() {
        double result = 2 * 3.14 * radius * (radius + height);
        System.out.println("Area of Cylinder: " + result);
    }
}

public class Main {

    public static void main(String[] args) {
```

```
Area of Circle: 78.5
Area of Cylinder: 244.92
Area of shape is undefined

=== Code Execution Success
```

Main.java

Share

Run

```java
class Shape {

    void area() {
        System.out.println("Area of shape is undefined");
    }
}

class Circle extends Shape {

    double radius = 5;

    @Override
    void area() {
        double result = 3.14 * radius * radius;
        System.out.println("Area of Circle: " + result);
    }
}

class Cylinder extends Shape {

    double radius = 3;
    double height = 10;

    @Override
    void area() {
```

Output

```
Area of Circle: 78.5
Area of Cylinder: 244.92
Area of shape is undefined

=== Code Execution Successful ===
```

```java
class BankAccount {

    double balance = 10000;

    void deposit(double amount) {
        balance += amount;
        System.out.println("Deposited: " + amount);
        System.out.println("Current Balance: " + balance);
    }

    void withdraw(double amount) {
        if (amount <= balance) {
            balance -= amount;
            System.out.println("Withdrawn: " + amount);
            System.out.println("Remaining Balance: " + balance);
        } else {
            System.out.println("Insufficient Balance");
        }
    }
}
